

## Technical Rider: “Mirlen’s Mad Ride”.

### **Required surface for performance:**

Front: total of 7 meters (including; adze, caravan and tent)  
Depth: 5 a 6 meters (considering “frontgarden” for easy access for the public)  
Towers: 4 meters high.

### **Caravan data:**

Length 3,50 meters built up plus 1,20 meter adze= 4,70 total length  
Width 2,04 meters  
Hight 2,30 meters

electricity: 220Volt 16 A 1000W

### **Attention:** Surface needs to be ‘horizontal’!!!

The total surface of caravan and tent need to be straight. Meaning no curves or other differences in hight. In the tent (backside caravan) there’s a construction that needs to be placed parallel and horizontal to the caravan, otherwise it’s impossible to get people into the performance. Little adjustments can be made, but the more horizontal, the better.
